ONLY RESULTS COUNT®

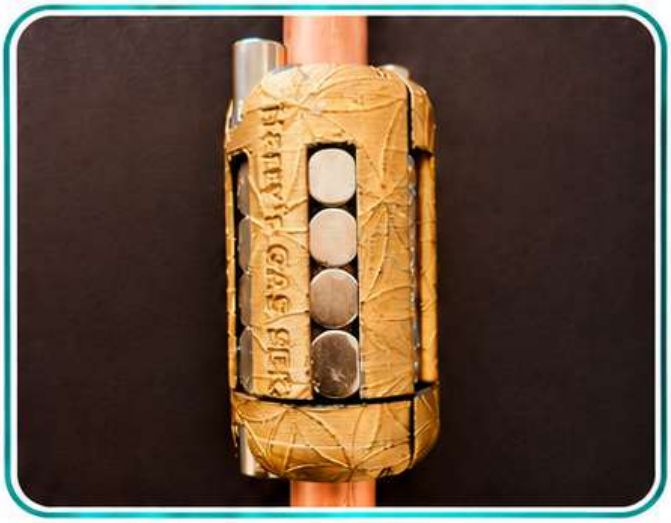
GET IT RIGHT FIRST TIME

Energy Saving Kit

Label Instructions:

Before assembling the kit, please watch the video on www.onlyresultscount.com

1. Disassemble the kit from the pipe enclosed.
2. The gaskit comes already fitted to a pipe to demonstrate how to fit it to your gas pipe. It's designed to fit to a 15mm copper pipe.
3. You need to locate the **15mm** gas pipe which supplies the gas boiler.
4. The ideal place is immediately below the gas boiler.
5. The two longer magnets point towards the boiler or anywhere on the gas pipe from the gas metre to the boiler, so that the two long magnets point forward in the direction of the gas flow.
6. Slide the kit around the outside of your gas pipe where there is sufficient clearance between the wall and the pipe.



This kit should last 50 years without maintenance
